Services

CNCC GIS & Environmental Consultants, LLC (CNCC_LLCC) uses GIS technology in combination with our environmental proficiencies for asset inventory, risk management, and landscape analysis to characterize such things as threatened and endangered species, bathymetric analysis, and infrastructure maintenance. Spatial acuity is tailored to client needs using equipment ranging in accuracy from 2-meter through sub-meter to sub-centimeter resolution. We specialize in showing clients how to share GIS/GPS data, whether from Garmin, Trimble, or Topcon, throughout various departments for projects or emergency management situations. We believe that GIS will be essential for all business and government departments.

We use the highest quality software such as: ESRI ArcGIS with numerous extensions; Trimble's Pathfinder Office; or Topcon Tools for site development and characterization. We have experience in bathymetry and terrain modeling, aerial photography and analysis of GPS data. We have completed GIS/GPS work meeting the requirements of COGCC for oil and gas positional accuracy.

Company Overview

CNCC GIS and Environmental Consultants LLC has been serving Northwest Colorado since 2005. For example, we've provided such things as Taylor Draw Dam Inundation Footprint to Federal Energy Regulatory Commission (FERC), Kenny Reservoir bathymetric analysis to Rio Blanco Water Conservancy District, Rio Blanco and Moffatt counties' parcel map through Internet Map Services (IMS) to local citizenry, and site characterization for campus infrastructure improvement to Colorado Northwestern Community College.

Our staff consists of Geographic Information System Professionals (GISP), environmental specialists, chemists, pilots, and field operators. We setup and provide training in GIS, in several levels of complexity, and provide GPS training for field data collection. Our personnel, software, and hardware provide the best value for government and business entities located in western Colorado, eastern Utah, and Wyoming.
